## **DETAILED ACTION**

### ***Priority***

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

### ***Response to Amendment***

In response to the amendment filed 28 July 2003, the drawings and the specification, including the abstract, are amended. Claims 1-7 and 9-11 are cancelled, and claim 12 added. Claim 12 is pending.

### ***Claim Objections***

Claim 12 objected to because of the following informalities: The term "Raman second amplifier" in line 16 should be changed to "second Raman amplifier" so that the terminology is consistent throughout the claim. Appropriate correction is required.

### ***Claim Rejections - 35 USC § 112***

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 12 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Art Unit: 2828

Claim 12 recites the limitation "the first Raman amplifier" in lines 12 and 14. There is insufficient antecedent basis for this limitation in the claim. The applicant should change the first instance of this limitation, in line 12, to "a first Raman amplifier" to provide the necessary antecedent basis.

***Allowable Subject Matter***

Claim 12 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, second paragraph, set forth in this Office action. The following is a statement of reasons for the indication of allowable subject matter:

There is not taught or disclosed in the prior art a method of forming ultrashort pulse Raman amplified laser light as in the claim. Particularly, there is not taught or disclosed the use of a Raman amplifier for generating compressed light that is then amplified twice by two different Raman amplifiers to produce ultrashort Stokes radiation. The prior art provides no suggestion to include the Raman oscillator to first compress the laser light before the dual Raman amplification. See the cited art in this action for similar systems, particularly Pradere et al. (US 4,618,783). The invention provides improved threshold characteristics over the prior art.

***Conclusion***

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

Art Unit: 2828

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
